Portfolio

SUMMARY

I build **web applications** encompassing all stages of the process, with a strong focus on delivering **high-quality**, **performant**, **well-tested** and **scalable** solutions.

Collaborate effectively within **cross-functional** and **distributed** teams, **leading** clear and accessible **architectural discussions** that simplify decision-making and align engineering efforts.

Take an **active mentoring role** to support and empower junior team members, providing valuable code reviews and constructive feedback. Actively promote a **culture of knowledge sharing**, continuous learning, and collaboration.

WORK EXPERIENCE

Synmax
Lead Software Engineer

10/2025 – Present | (Remote) London, UK

- **Lead product development** throughout the entire software development lifecycle, from **early-stage feasibility studies** to design reviews, **testing strategy**, **deployment**, **post-deployment monitoring**, and **documentation**. Coordinate across distributed international teams, ensuring **developers** have a **clear**, **unambiguous workflow** while keeping **stakeholders** informed through **consistent communication**.
- Apply **Domain-Driven Design** (**DDD**) to architect **scalable** frontend and backend **systems**, defining clear **domain boundaries**, **APIs**, and **data flows** that **reduce cross-team dependencies**, **maximise performance**, and keep **code lightweight**, **maintainable**, and **extensible**.
- Build a **robust testing architecture** that **prioritises** development **velocity** and **reliability** while incorporating **frontend-backend contract validation**, **accessibility** testing, and comprehensive quality assurance practices.
- Introduce **agentic AI workflows** into the software development lifecycle by defining **reusable skills**, guidelines, and **automated processes** that improve **coding agent consistency**, **automate repetitive engineering tasks**, and increase developer productivity.
- Architect a **normalised** client-side **state management architecture** for **data-heavy**, **WebGL-intensive** applications, supporting **entities** such as **folders**, **workstations**, and multiple subsections while **improving scalability**, **maintainability**, and **separation** of **concerns**.

IVC Evidensia
Senior Software Engineer

07/2025 – 10/2025 | (Remote) UK

- **Lead Engineer** for the Booking & Reminders product suite, responsible for the end-to-end technical strategy and execution.
- Led the **successful production deployment** and **post-launch monitoring** of a new booking platform, ensuring 100% system reliability.
- Pioneered the **adoption of modern testing frameworks** and strategies (e.g., integration over E2E) across the frontend function, leading to more reliable and maintainable test suites.
- **Architected a modular, component-based system** to integrate a shared user journey across multiple platforms, ensuring consistency and reducing time-to-market.
- **Championed accessibility** by creating governance standards and introducing tooling (e.g., Axe) into the deployment pipeline, significantly improving product inclusivity

ClearScore
Senior Software engineer

01/2020 – 06/2025 | (Hybrid) London, UK

- Led and contributed to the complete **front-end technical re-architecture**, driving the adoption of a **Server-Driven UI (SDUI)**.
- **Architecture** and development of complex, **high-impact features**, ensuring accessibility, mobile-first performance, and seamless cross-browser functionality.
- Deep experience designing and implementing **accessible web forms** by adhering to **WCAG** standards, leveraging semantic HTML, ARIA roles, and keyboard navigation.

SKILLS

Languages & Environments — Javascript - Typescript - Terraform - GraphQL - Node.js - HTML - CSS - SVG - SQL

Frameworks — Next.js - Remix - Gatsby - Fastify - Vite

Libraries & Tools — React - React Router - Redux - TanStack Query - RadixUI - Mantine

Architecture — Backend for frontend - Micro frontend - Microservices - Event-driven

Best practices — DDD - TTD - Accessibility - Responsive design - Modularisation - Reusability - SOLID - XP - KISS

Testing — Jest - React Testing Library - Enzyme - Cypress - Playwright

Styling — PostCSS - CSS in JS - Styled JSX - Animations

Cloud services & CI/CD — AWS - Amplify - GCP - Vercel - GTM - GitHub Actions - Jenkins

Monitoring — Datadog - Sentry - SignalFx - Grafana

CMS tools — Contentful - Bynder

AWARDS

Recognition

Recognised for resolving a critical HTML injection security vulnerability in one of our applications.

LANGUAGES

Italian ●●●●●

English ●●●●●

- **Lead projects** within **cross-functional** and **multiplatform teams** to evaluate technical and design feasibility, addressing complex UI/UX challenges and cross-domain API integrations.
- Proficiently worked with **Backend For Frontend microservices** architecture to optimise project structure and reduce client logic.
- Demonstrated a strong work ethic by taking **full ownership of the feature lifecycle**, encompassing development, testing, deployment, proactive monitoring and bug fixes.
- Developed and maintained a scalable **Design System**, establishing coding standards and promoting best practices for accessibility.
- Actively collaborate in **leading tech migrations**, driving the transition from **Enzyme to RTL**, **JavaScript to TypeScript** and **Redux to React Query**, **Fastify V3 to V4**, and internal Node.js packages from **CJS to ESM**, resulting in improved code maintainability and a reduction in runtime errors.
- Utilised cutting-edge technologies such as **Next.js, GTM, CSS Modules, Remix, Node.js** and **Fastify**.
- Utilised CI/CD tools like **Jenkins** and **Spinnaker** to streamline deployment processes, ensuring efficient and reliable delivery pipelines, achieving a 30% faster release cycle and higher system stability.
- Adopted comprehensive **monitoring solutions**, including user interaction tracking, Sentry for client application health, **Datadog**, and **Grafana** for backend service monitoring.
- Assumed responsibility for **on-call duty**, ensuring prompt resolution of issues or outages to maintain optimal system performance.
- Created **technical documentation** to facilitate knowledge sharing, streamline onboarding, and support team development processes.
- Applied **critical thinking** to evaluate existing features, identify areas for improvement, optimise **code efficiency,** enhance functionality, and streamline user interactions.
- Take an active **mentoring role** to empower team members by providing constructive feedback and creating **growth-focused development plans**, which increase overall team efficiency.
